

iDock® 2.0 Controls

Specification Sheet & Submittal

Standard Features

Advanced controls of loading dock equipment	Integrated controls of all Poweramp dock equipment and dock door installed
Interactive message display with system information	3-color light communication system
View equipment usage and maintenance history	NEMA 3R nonmetallic enclosure
Backlit, raised dome-button design for ease of use	Integrated video
Fault code troubleshooting display and internal LED lights	Designed and manufactured in the USA

General Description

iDock Controls are technologically advanced push-button controllers and light communication used with various Poweramp loading dock equipment. iDock Controls are standard with all automatic Poweramp vehicle restraints, used with or without dock levelers.

Construction

iDock Controls are made with UL 3R Nonmetallic enclosures. The controls feature a modular design to reduce maintenance costs. 3-in-1 light assembly on the controller shows the state of the station and whether it is safe to enter the trailer. LCD display shows status of controls and explains fault conditions. Backlit, raised dome-buttons provide positive feedback and guide users through operation.

Touch Interface

iDock Controls feature an interactive LCD message display for equipment information, system information, maintenance history, counters, and settings. The Display will also provide notices of faults, or instructions for Bypass Restraint mode, the ability to lock the iDock controller, or a sequence of operation.

Warranty

iDock 2.0 Controls feature a full one (1) year base warranty on mechanical and electrical parts, including freight and labor charges in accordance with Systems, LLC's Standard Warranty Policy. Systems, LLC warrants all components to be free of defects in materials and workmanship, under normal use, during the warranty period. This base warranty period begins upon the completion of installation or the sixtieth (60th) day after shipment, whichever is earlier.
