McGuire manufacturers a complete line of loading dock equipment including hydraulic, air-powered and mechanical levelers, edge-of-docks, portable steel yard ramps, safety vehicle restraints, seals, shelters and accessories. You can completely outfit your entire loading dock area with McGuire’s comprehensive line of loading dock equipment.

**Accessories**

**iDock® Controls**

iDock Controls integrate your installed McGuire dock levelers, vehicle restraints, and other dock accessories, as well as door operators. Interlocking equipment controls provides a sequence of operation for your dock equipment, improving safety and energy efficiency.

Compared to other standard green and red systems, iDock Controls utilize an additional third amber light if a fault is detected or restraint is in bypass mode.

**iDock® Connect**

iDock Connect allows you to improve your loading dock efficiency. Once your powered dock equipment is installed with iDock Controls and paired with an iDock Gateway, simply create an online account at iDockConnect.com and review the analytics of your loading dock activity.

Configure your notifications in iDock Connect to receive email or text message alerts of loading dock events, such as maintenance past due, after-hours activity, doors left open, truck arrival/departure, and many more.

**Dock Seals and Shelters**

McGuire offers a complete line of dock seals and shelters that are custom designed to fit your building opening and the trucks you will be servicing. Dock seals and shelters save energy dollars while providing bug and rodent protection at the loading dock area during material handling operations.

**AVAILABLE SEALS**

- TS101 Seal with Fixed Head Pad
- TS103 Seal with Head Curtain
- TS500 Seal with Adjustable Head

**AVAILABLE SHELTERS**

- TC400 Rigid Wood Frame Shelter
- TC300 Flexible Steel Frame Shelter
- TC900 Soft Sided Shelter
- TC1000 Weather Sentry Shelter

**Safety Barriers**

McGuire’s Barrier Lip extends 5” to 7” above the cross traffic position and prevents forklift trucks from driving over the dock edge. The Barrier Lip is usable anytime the leveler is in the cross traffic position and offers a smooth transition between the platform and lip.

McGuire’s Bar-Lift Barrier prevents forklift trucks from driving over the dock edge, as well as protects the overhead door from damage. Its hydraulic operation provides years of trouble-free service for use with both mechanical and hydraulic dock levelers. The Bar-Lift Barrier can also be installed on docks without levelers.

**Accessories**

The Allied Solutions division of McGuire provides all of the additional items required at your loading dock.

Dock accessories from Allied Solutions can help you improve your loading dock’s efficiency and productivity with its comprehensive line of aftermarket products. These products will protect your employees from dock-related accidents and enhance your loading dock communication and safety. Our products are designed to reduce damage and increase productivity at the loading dock.
Loading Dock Levelers

**Hydraulic Dock Levelers**

Hydraulic dock levelers are push-button activated for a smooth, consistent operation. They utilize fully powered raise and lip extension functions with hydraulic cylinders. With the lowest cost of ownership, McGuire hydraulic levelers are also the safest loading dock choice, as these levelers contain in-line velocity fuses to prevent free fall in a truck pull-out situation.

**AVAILABLE MODELS**

- Autodok® H Series
- HP Series

**Air-Powered Dock Levelers**

Air-powered dock levelers are an economical alternative to hydraulic levelers, but are still operated with a push-button activation for ease of use. They have a mid-range capacity with an air bag or bellows system used to raise and lower the deck. The CentraAir® uses compressed air and doesn’t require any electricity in the dock pit.

**AVAILABLE MODELS**

- CentraAir Series
- MA Series

**Mechanical Dock Levelers**

McGuire’s mechanical dock leveler is an economical solution for basic applications, while still providing strength and durability. This leveler uses a pull chain activation to raise the deck. The operator then simply walks the deck back down to the bed of a trailer or to a stored position.

**AVAILABLE MODELS**

- MP Series

**Edge-of-Dock Levelers**

Edge-of-dock levelers are a great solution for select applications. They mount directly to the dock face and provide a recommended working range of ±1” and a maximum operating range of ±5” above or below dock. The units are offered with either mechanical or hydraulic operation.

**AVAILABLE MODELS**

- HED Hydraulic Series
- MEDLF Mechanical Series

**Vertical Storing Dock Levelers**

Vertical storing dock levelers are hydraulically operated and offer unmatched environmental control for customers with food storage or temperature sensitive applications. By storing in the vertical position, the VSH Series allows the overhead door to form a perfect seal to the pit floor. VSH Series levelers also: offer improved cleanliness, overhead door protection, increased security, improved productivity, and easy maintenance.

Vehicle Restraints

**Hold-Tite® Series**

The Hold-Tite is a non-impact, self-aligning, hydraulic vehicle restraint that is mounted to the drive or dock face and is push-button operated.

**SAFETY FEATURES**

- Actively seeks and secures a trailer’s Rear Impact Guard (RIG).
- Maintains a positive hydraulic hold of the RIG for zero running room.
- LED 3-light system for advanced communication between the truck driver and dock attendant.

**TPR UniLock® Series**

An upgrade from the standard TPR, the UniLock provides an advanced cam design that rotates the hook away from the trailer’s Rear Impact Guard (RIG) to release “RIG Wedge” pressure.

**SAFETY FEATURES**

- Locking mechanism to prevent the restraint from disengaging the trailer’s RIG when pressure is applied.
- Universally effective on any obstructed RIG, including intermodal trailers with a cover plate.
- LED 3-light system for advanced communication between the truck driver and dock attendant.

**TPR® Series**

The TPR is a push-button operated, trailer-positioned vehicle restraint that is mounted to the face of the dock and utilizes a rotating hook to secure the trailer’s Rear Impact Guard (RIG).

**SAFETY FEATURES**

- Unit automatically positions itself when lowered by the trailer’s RIG.
- Motor and gears keep hook continuously engaged with the trailer’s RIG.
- LED 3-light system for advanced communication between the truck driver and dock attendant.

**Stop-Tite® Series - Automatic**

The Stop-Tite Automatic is a non-impact, hydraulic vehicle restraint that is mounted to the drive or dock face and is push-button operated.

**SAFETY FEATURES**

- Low profile, non-impact design
- Hydraulic operation to vertically raise the restraint and engage the RIG.
- LED 3-light system for advanced communication between the truck driver and dock attendant.

**Stop-Tite® Series - Manual**

The Stop-Tite Manual is a non-impact, manually operated vehicle restraint that is mounted to the drive or dock face and is manually operated.

**SAFETY FEATURES**

- Economical solution for a vehicle restraint.
- Low profile, non-impact design.
- RIG sensor bar on the Auto and MAL to notify the operator if the restraint is not engaged with the trailer’s Rear Impact Guard.
- LED light communication available with the MML and MAL.
Loading Dock Levelers

Hydraulic Dock Levelers

Hydraulic dock levelers are push-button activated for a smooth, consistent operation. They utilize fully powered raise and lip extension functions with hydraulic cylinders. With the lowest cost of ownership, McGuire hydraulic levelers are also the safest loading dock choice, as these levelers contain in-line velocity fuses to prevent free fall in a truck pull-out situation.

AVAILABLE MODELS
• Autodok® H Series
• HP Series

Air-Powered Dock Levelers

Air-powered dock levelers are an economical alternative to hydraulic levelers, but are still operated with a push-button activation for ease of use. They have a mid-range capacity with an air bag or bellows system used to raise and lower the dock. The CentraAir® uses compressed air and doesn’t require any electricity in the dock pit.

AVAILABLE MODELS
• CentraAir Series
• MA Series

Mechanical Dock Levelers

McGuire’s mechanical dock leveler is an economical solution for basic applications, while still providing strength and durability. This leveler uses a pull chain activation to raise the deck. The operator then simply walks the deck back down to the bed of a trailer or to a stored position.

AVAILABLE MODELS
• MP Series

Edge-of-Dock Levelers

Edge-of-dock levelers are a great solution for select applications. They mount directly to the dock face and provide a recommended working range of +/-3” and a maximum operating range of +/-5” above or below dock. The units are offered with either mechanical or hydraulic operation.

AVAILABLE MODELS

• MEDLF Mechanical Series

Vertical Storing Dock Levelers

Vertical storing dock levelers are hydraulically operated and offer unmatched environmental control for customers with food storage or temperature sensitive applications. By storing in the vertical position, the VSH Series allows the overhead door to form a perfect seal to the pit floor. VSH Series levelers also offer improved cleanliness, overhead door protection, increased security, improved productivity, and easy maintenance.

Vehicle Restraints

Hold-Tite® Series

The Hold-Tite is a non-impact, self-aligning, hydraulic vehicle restraint that is mounted to the drive or dock face and is push-button operated.

SAFETY FEATURES
• Actively seeks and secures a trailer’s Rear Impact Guard (RIG).  
• Maintains a positive hydraulic hold of the RIG for zero running room.  
• LED 3-light system for advanced communication between the truck driver and dock attendant.

TPR® Series

An upgrade from the standard TPR, the UniLock provides an advanced cam design that rotates the hook away from the trailer’s Rear Impact Guard (RIG) to release “RIG Wedge” pressure.

SAFETY FEATURES
• Locking mechanism to prevent the restraint from disengaging the trailer’s RIG when pressure is applied.  
• Universally effective on any obstructed RIG, including intermodal trailers with a cover plate.  
• LED 3-light system for advanced communication between the truck driver and dock attendant.

TPR UniLock® Series

An upgrade from the standard TPR, the UniLock provides an advanced cam design that rotates the hook away from the trailer’s Rear Impact Guard (RIG) to release “RIG Wedge” pressure.

SAFETY FEATURES
• Locking mechanism to prevent the restraint from disengaging the trailer’s RIG when pressure is applied.  
• Universally effective on any obstructed RIG, including intermodal trailers with a cover plate.  
• LED 3-light system for advanced communication between the truck driver and dock attendant.

Stop-Tite® Series - Automatic

The Stop-Tite Automatic is a non-impact, hydraulic vehicle restraint that is mounted to the drive or dock face and is push-button operated.

SAFETY FEATURES
• Low profile, non-impact design.
• Hydraulic operation to vertically raise the restraint and engage the RIG.
• LED 3-light system for advanced communication between the truck driver and dock attendant.

Stop-Tite® Series - Manual

The Stop-Tite Manual is a non-impact, manually operated vehicle restraint that is mounted to the drive or dock face and is manually operated.

SAFETY FEATURES
• Economical solution for a vehicle restraint.  
• Low profile, non-impact design.  
• RIG sensor bar on the Auto and MML to notify the operator if the restraint is not engaged with the trailer’s Rear Impact Guard.  
• LED light communication available with the MML and MAL.
