Advanced Interactive Control of your Loading Dock Equipment

Advanced 3-Color Light Communication
Compared to other standard green and red systems, iDock Controls utilize an additional third amber light if a fault is detected or restraint is in bypass mode.

Operator Interface
Using membrane dome button technology, operators can clearly feel and hear when they press a button, confirming that the equipment will begin operation.

Sequence of Operation
1. Check that trailer is positioned squarely against dock bumpers.
2. If Rear Impact Guard (RIG) is missing or other obstructions present:
   a. Release restraint
   b. Reset lights if BYPASS MODE is active (or close door to reset lights, if equipped)
3. Press ENGAGE button to activate restraint.
4. Visually inspect restraint and verify capture of RIG.
5. Press MENU button and select OPERATING MODE on the display by pressing ENTER button.
6. When loading or unloading is complete, press RAISE button to return dock leveler to stored position.
7. Only allow equipment or personnel on leveler once all motion has stopped and lip rests securely on transport vehicle.
8. Unsecure trailer if secured by other means.

Interactive Message Display Includes:

Equipment Information
Access information about your dock equipment, including the serial number, installation date, and the door number.

Systems Information
View detailed information regarding your installed dock equipment and the options that are currently active.

Maintenance History
See all of your maintenance records as well as schedule a maintenance reminder that will alert you when the scheduled day has come.

Counters
View your loading dock equipment statistics, such as cycle counts, optional forklift activity, faults, and more.

Integrated Controls
iDock Controls integrate your installed McGuire dock levelers, vehicle restraints, and other dock accessories, as well as door operators. Interlocking equipment controls provides a sequence of operation for your dock equipment, improving safety and energy efficiency.
