

iDock Control System Firmware Update

Always read and understand the Owner's/User's Manual and become thoroughly familiar with the equipment and its controls before installing or operating equipment. **Failure to read and understand owner's/user's manual may result in voiding of warranty, damage to equipment, death or serious injury!**

These instructions describe the steps required to update the firmware on the iDock Control System. If a firmware update is required, Systems, LLC will provide a Micro SD card containing the relevant firmware and the following must be completed to complete the update:

1. Post safety warnings and barricade the work area at dock level and ground level to prevent unauthorized use of the equipment before the update is complete.
2. Turn power off to controls.
3. Open the control box.
4. Insert the Micro SD card into the iDock Main Board (see Figure 1, Detail A).
5. Press and hold the UP button (A) on the control box (see Figure 2).
6. While holding the UP button (A) on the control box, restore power to the controls.
7. When Message Display (B) shows "File Found," release UP button (A, see Figure 2).
8. iDock Control System will automatically reset when firmware update is complete.
9. Turn power off to controls.
10. Remove Micro SD card.
11. Restore power to controls and return equipment to service.
